DETAILED ACTION

Drawings

1. The drawings are objected to because informal nature of the drawings (handwritten labels, numbering, non-uniform lettering). Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1-6, 10, 11, 13-17, and 20-25 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by Levin et al. (USP 5,955,910). Levin discloses a sleep transistor or regulator transistor (124, figure 6) with a plurality of error amplifier circuits (figure 2).

4. Claims 1, 7, 10, 13, 22 and 23 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by Tschantz et al. (USP 6,744,304). Tschantz discloses a control circuit (220), a first (236) and second (210) sleep transistors.

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1, 8, 9, 10, 18, 19, 22, 23 and 26 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Tanizaki (USP 6,384,674). Tanizaki discloses sleep transistors utilizing a memory circuit and memory cell arrays. See figure 1.

Claim Rejections - 35 USC § 103

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7. Claims 12, 27-30 are rejected under 35 U.S.C. 103(a) as being unpatentable over Levin et al. (USP 5,955,910) in view of Tanizaki (USP 6,384,674) and further in view of Keshavarzi et al. (USP 6,765,414). Levin teaches a sleep transistor or regulator transistor (124, figure 6) with a plurality of error amplifier circuits (figure 2). Tanizaki teaches sleep transistors utilizing a memory circuit and memory cell arrays. (See figure 1.) Keshavarzi discloses the use of multiplexers in field regulator circuits utilizing sleep transistors. It would have been obvious to one having ordinary skill in the art at the time of the invention was made to provide the use of multiplexers in field regulator circuits utilizing sleep transistors of Keshavarzi with the sleep transistors with a plurality of error amplifiers utilizing a memory circuit and memory cell arrays of Levin and Tanizaki, in order to exert a digital control signal for the precise control of the sleep transistor.
